

# IT'S YOUR DOODY! Clean up after your pet!

Forgot a bag no problem, have one on us!

## Pet Waste is Toxic

Pet waste is not fertilizer and does not wash away, rain washes pet waste down storm drains which gets to all our rivers and oceans.

## Negative Effects

Animal Waste contains pollutants that harm our waters. When dog waste ends up in water it decomposes and releases nutrients that form algae and weeds. It makes water smelly and murky and then we cannot swim, fish or boat!

## Brooklyn, N.Y.

On average there are 80,000 registered dogs in New York. 1 dog makes .75 lbs of pet waste per day. 1g of pet waste contains 23 million coliform bacteria.

## What can you do!

Be smart and use biodegradable bags!

**Take one for #2!**
